

Shock

- New Feature – Holds data files that are open when you change graph types.
- New Feature – Multi plot page allows user to display three graphs and report page on one page. (new tab above graph)
- New Feature – Show/hide all for MCVP or PVP graphs. Right click on file name in legend, allows user to hide or show all data traces under a MCVP or PVP graph.
- New Feature – Manual move, EMA feature will move actuator to a set displacement of force before running selected test. (must be activated by REI, extra cost option)
- Repairs EMA slam to BDC when test is aborted.
- New feature – Adds software support for Load assist, allows manual offset to a force or displacement before starting a test.
- Corrects .csv import problems.
- Bug 1038 fixed - motor temp bar graph off in metric units
- Bug 1039 fixed - if you go to edit a pvp test and select multi point gas test you never get the window to create the test
- Bug 1039 fixed - Registry entries aren't deleted when double-clicking on a registry file. This can cause (and is especially prevalent in 6.3.73, "deleted channels" to still appear and mask the real channels that were supposed to be entered by system settings registry file.
- Bug 1042 fixed - show live temp is in English units when your preferences is set to metric
- Bug 1046 fixed - the analog output signals associated with the custom wave form aren't displayed when view wave form is clicked on the test screen. this makes it hard to know what signals are defined by the test
-

- New Feature – Continue test button, allows user to pause test then continue.
- New Feature – Allows user defined folder to save test data.
- New Feature – metric units.

GLT

- Bug 1092 fixed – did not warn if used did not have administrator privilege.
- Bug 1093 fixed - no valid limit values are displayed when compression and rebound limits are off and peak to peak validation limit is on.
